

## Collect Engage Change

Through integrated devices, services, and machine learning our software platform offers a total solution for senior living communities to better manage the health, wellness and safety of seniors through integrated remote care management. Seniors are more optimistic than ever about their future wellness and the roll technological advances play in them living happy and healthy at home longer. Our mobile-based devices are leading the way in advanced technologies that support seniors, their families and their care teams. Our services offer health management tools and safety solutions to senior living communities that better manage their populations remotely and improve quality of life.

**Over 10,000 Americans turn 65 each day, making seniors the fastest growing demographic.**

How will we face the challenges of caring for such a rapidly growing population?

Senior care models must be refocused on digital health and connected care. Integrated medical devices promote care plan adherence by keeping seniors safe, healthy, and connected in the home longer.

- BLE, Wi-Fi, LTE connectivity
- Touch screen and voice controlled
- Automatic fall detection
- SOS panic button
- Heart rate, respiratory rate, SpO2
- ECG
- **Activity level and step count**
- Sleep monitoring

**Our vision is to enable people to take control of their own health and wellness.**

There is a reason why GPS device for elderly is important. As a person ages, they become more at risk of memory-related problems such as dementia and Alzheimer's disease. People who suffer from these conditions have a tendency to become unfamiliar with places they have been to before and find it difficult to adjust to new environments. These memory-related diseases can lead to wandering. Wandering is a concern for caregivers and family members as it places their elderly loved ones in dangerous situations. This is how GPS device for elderly drivers have become a necessity.
