

RKB- Simply a Smarter Solution

RKB's medical lockbox solution is an extension to your standard cash/image lockbox for medical providers. The system provides you with a total digital environment via a consolidated financial web portal where all payment information and related electronic and paper documents, along with images are stored. The electronic payment data is archived along with any imaged documents, check images and/or ACH payment information for a period of 7 years. We are the core for all of their financial/claims transactions increasing their administrative efficiency by minimizing all electronic and paper claim handling.

By implementing the RKB system they will improve collections, increase employee productivity, decrease write-offs, streamline the overall workflow, reduce the chance for fraud, and dramatically improve their profitability and their overall healthcare revenue cycle.

RKB provides a full range of receivables management and research tools that work in tandem with a Healthcare Provider's Patient Accounting and/ or Practice Management Systems, existing Bank, and existing Clearinghouse. Our SAAS model is non-disruptive.

The solution is designed to increase revenue, shorten the associated revenue cycle and significantly decrease manual processing costs, thereby increasing overall revenue lift opportunities.

Key Differentiators

- Non-Disruptive ASP Model: Bank, Lockbox, Billing System and Clearinghouse Neutral
- Rapid Deployment -Onboarding average of 10 days (QA Process for 835 and NACHA / BAI2)
- Dedicated Healthcare RCM and Technical Onboarding Expertise
- Assessment, Definition of Scope & Deliverables, Implementation, Account Management
- Bank payment file receipt
- Workflow Management
- Competitive Pricing- Low Cost / High Margin

Benefits to the Healthcare Organization

Savings- RKB can RECOVER REVENUE that is lost due to billing complexities, reduce preventable admissions, readmission penalties, ER visits, and the costs of patient care. Improved Patient Satisfaction, Improvement to your Care Coordination efforts, detailed Reporting that tracks patients progress, staff efficiency, and specific care progress (who, what, and when). Immediate EMR updates.

Monitoring- Ability to monitor all patients, any conditions including multiple comorbidities. Identify patients at risk, reduce readmissions, penalties, unnecessary ER visits, alert any staff or coordinators when an intervention is needed. Free up staff to work with more patients.
